COLLEGE OF ARTS AND SCIENCES

Bachelor of Science in Fisheries and Aquatic Sciences

Reference CMOs: CMO No. 43, Series of 2006 and CMO No. 4, Series of 2018

Provisional Curriculum Description

The curriculum for the Bachelor of Science in Fisheries and Aquatic Sciences program includes the general education courses, mandated courses, foundation (core) courses, professional (major) courses, and required electives.

Program Objectives

This program aims to produce:

- Globally competitive graduates in the areas of sustainable aquaculture, capture fisheries, post-harvest and aquatic resources and ecology;
- Fisheries professionals imbued with high level of integrity, nationalism and ethical standards;
- Leaders in their profession and respective communities; and
- Professionals with knowledge, skills and positive attitudes in fisheries research, resource management, instruction, extension, production and marketing.

Student Outcomes

The graduates of the Bachelor of Science in Fisheries and Aquatic Sciences must possess the following competencies:

- Develop, operate and manage aquaculture production systems;
- Utilize fisheries resources using innovative fishing methods which are responsible and sustainable;
- Apply post-harvest practices that are compliant to international standards for food safety and quality; and
- Manage and protect the integrity and quality of aquatic ecosystems and resources.
