

## **CURRICULUM**

### **Bachelor of Science in Civil Engineering (BSCE)**

Academic Year 2018-2019

Reference CMOs: CMO No. 92 s. 2017, CMO No. 4 s. 2018 and CMO No. 20, s. 2013

#### **Curriculum Description**

Civil Engineering is a profession that applies the basic principles of science in conjunction with mathematical and computational tools to solve problems associated with developing and sustaining civilized life on our planet.

The Civil Engineering curriculum is designed to prepare graduates to apply knowledge of mathematics, calculus-based physics, chemistry, and at least one additional area of basic science, consistent with the Program Educational Objectives; apply knowledge of technical areas appropriate to civil engineering; conduct civil engineering experiments and analyze and interpret the resulting data; design a system component, or process in more than one civil engineering context; explain basic concepts in management, business, public policy, and leadership; and explain the importance of professional licensure.

#### **Program Educational Objectives**

The graduates of Bachelor of Science in Civil Engineering within three to five years after graduation shall:

1. successfully participate as partners in nation-building in engineering projects involving structural, geotechnical, water resources, transportation and construction management; and
2. adhere to professional, moral and ethical standards in the practice of civil engineering

#### **Student Outcomes**

The following skills, knowledge, and behaviors are expected to be attained by students as they progress through the program:

- a. Ability to apply knowledge of mathematics and science to solve engineering problems.
- b. Ability to design and conduct experiments, as well as to analyze and interpret data.
- c. Ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability, in accordance with standards.
- d. Ability to function on multidisciplinary teams.
- e. Ability to identify, formulate, and solve engineering problems.
- f. Understanding of professional and ethical responsibility.
- g. Ability to communicate effectively.
- h. Broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
- i. Recognition of the need for, and an ability to engage in life-long learning.
- j. Knowledge of contemporary issues.
- k. Ability to use techniques, skills, and modern engineering tools necessary for engineering practice.
- l. Knowledge and understanding of engineering and management principles as a member and leader in a team, to manage projects and in multidisciplinary environments.
